Alberta Economic Accounts 1999

PREFACE

This publication has been prepared by Alberta Treasury as an update to the 1998 Alberta Economic Accounts publication, published last year. These accounts include revisions to some series back to 1993 to take into account revised data. In addition, the treatment of government pensions has been changed, resulting in revised data for personal income back to 1971 (see methodology section for more details).

In preparing these estimates, Alberta Treasury relies on input data from Statistics Canada and other provincial government departments. We would like to thank Statistics Canada and the various departments for their co-operation and assistance in providing us with data.

This publication contains data for 1971 to 1999. All data for this publication are available on diskette or by E-mail at a cost of $50. Each diskette contains all tables from the economic accounts that are normally available on ASIST (Alberta Statistical Information System), including some data not in this publication.

Enquiries concerning the publication, requests for additional copies, a copy of the diskette, or information on ASIST retrievals should be directed to:

Alberta Economic Accounts 1999

INTRODUCTION

The first section of this publication provides a brief description of how the Alberta economy performed in 1999, a description of the data revisions that have been incorporated into the publication this year, and an explanation of the basic concepts underlying the economic accounts and their measurement. The second section contains data tables for the income and expenditure accounts in both current and constant (1992) dollars, plus detailed tables that present the accounts by industry, provide a breakdown of exports, and describe consumer expenditures and personal income. The final section provides a brief definition/explanation of terms that appear throughout the economic accounts publication.

Alberta Economic Accounts

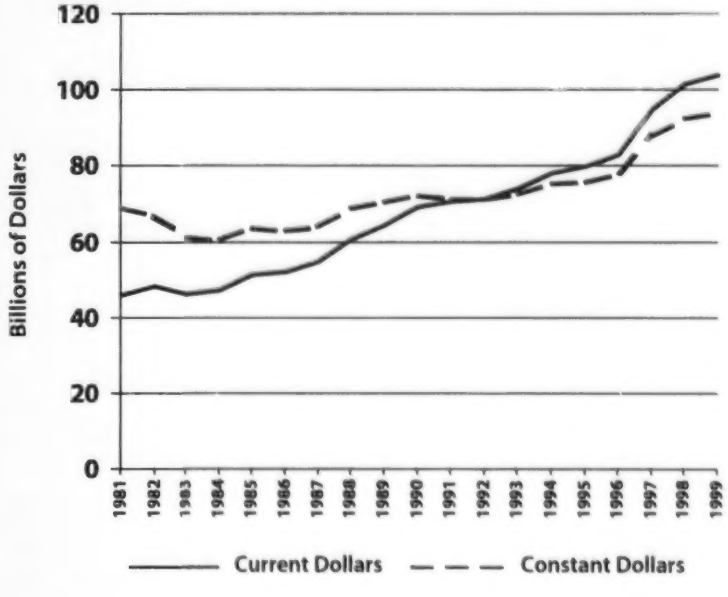
THE ALBERTA ECONOMY IN 1999

The value of goods and services produced in Alberta, as measured by GDP, was $115.4 billion (current dollars) in 1999, an increase of 9.0% from the 1998 level. When converted to constant (1992) dollars, GDP was $103.8 billion, an increase of 3.6%.

FINAL DOMESTIC DEMAND

The growth rate for GDP is often affected by swings in the balance of trade or jumps in the statistical discrepancy, so analysis of Final Domestic Demand (FDD - the sum of consumer and government expenditures, plus business and government investment) gives a truer picture of the domestic economy. In 1999, FDD grew by 2.3% in current dollars and by 1.5% in constant (1992) dollars. The rate in current dollars was lower than the growth rate for GDP, indicating that the domestic economy had less impact on the growth of Alberta's economy than in the two previous years, where domestic growth was the main source of growth in the economy.

FINAL DOMESTIC DEMAND

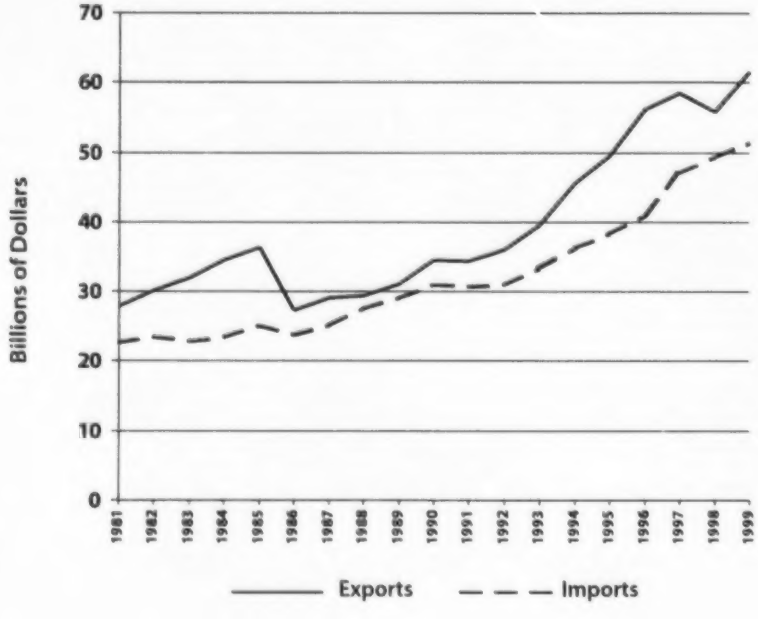


EXPORTS AND IMPORTS

Exports out of Alberta (which includes international and interprovincial exports) grew by 10.2% in current dollars and by 1.1% in constant or real dollars. The reason for this was that the overall price index for exports jumped by 9.0% due to rising prices for oil and natural gas. Total manufacturing exports were up 6.3% (4.7% real) in 1999 after falling by 2.4% (-1.6% real) in 1998. More details on exports can be found in Tables 16 and 17.

The value of imports into Alberta was up 4.5% in current dollars (4.3% real) compared to a growth of 4.6% (3.1% real) in 1998. The net effect on Alberta's trade balance, with the large rise in exports, was a $3.5 billion (53%) increase in current dollars and a $1.2 billion (12.0%) decrease in constant (1992) dollars.

TRADE BALANCE (CURRENT DOLLARS)



HIGHLIGHTS OF THE EXPENDITURE ACCOUNT IN CONSTANT DOLLARS

(All highlights in this section are in constant (1992) dollars)

PERSONAL EXPENDITURE ON GOODS AND SERVICES

Consumer expenditures grew by 3.3% in 1999, maintaining the same rate of growth as in 1998. Expenditures on durable goods were up 3.7% in 1999 — down from the 5.2% growth in 1998. Expenditures on services were up 3.8% in 1999 compared to the increase of 2.0% in 1998. Consumer expenditures on semi-durable goods were up 0.2% compared to 6.6% in 1998, while expenditures on non-durable goods grew by 3.1% after increasing by 3.9% in 1998. Further details on personal expenditures can be found in Tables 14 and 15.

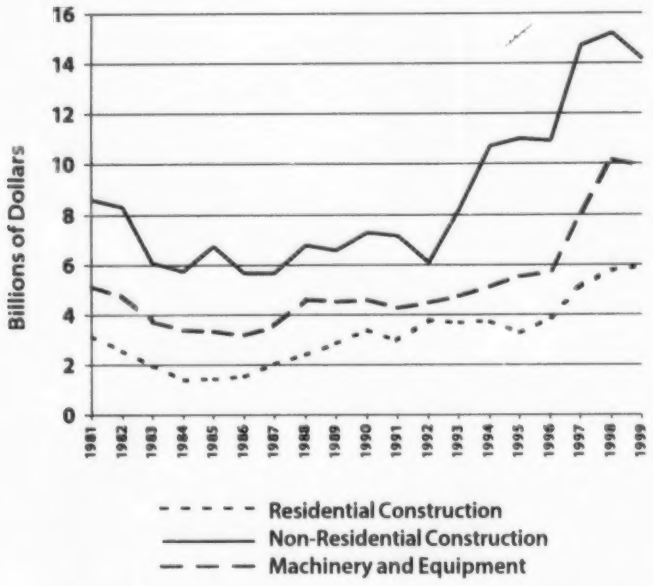
GROSS FIXED CAPITAL FORMATION

Combined business and government investment fell by 1.1% in 1999 after growing by 10.2% in 1998. Business investment in new machinery and equipment grew by 4.9%, while business residential construction fell 0.9% and non-residential construction dropped 8.2%. Total government capital formation grew by 22.1% compared to the increase of 12.1% in 1998.

GOVERNMENT EXPENDITURES ON GOODS AND SERVICES

Government spending by all levels of government increased by 1.3% in 1999 after growing by 3.1% in 1998. Real government spending still remains almost 10% below its peak of $16.3 billion in 1990.

BUSINESS INVESTMENT (CURRENT DOLLARS)



INVENTORIES

There was an accumulation of $793 million in inventories in 1999 comprised of a build-up of $550 million in non-farm inventories and a build-up of $243 million in farm inventories. Total inventories were down $435 million in 1998.

HIGHLIGHTS OF THE INCOME ACCOUNT

(All highlights in this section refer to growth in current dollars)

WAGES AND SALARIES

Labour income increased by 6.4% in 1999 compared to the 8.0% growth in 1998. The construction industry had the highest rate of growth in 1999 (14.2%), followed by transportation, storage and communications (11.6%). Wages and salaries in the mining industry was up only 0.2%, the smallest increase since 1995. Further details on wages and salaries by industry can be found in Table 12.

CORPORATION PROFITS

Corporation profits were up over 58% in 1999 after dropping 27.1% in 1998, thanks mainly to rising oil and natural gas prices in the second half of the year.

FARM INCOME

Accrued farm income grew by 38.5% in 1999 after dropping 20.8% in 1998 and 54.8% in 1997. Accrued farm income is the sum of net farm income (which increased by over 54% to a level of $250 million, but is still far below the 1995 level of $933 million) and the adjustment to farm income which increased 13% in 1999. Farm inventories increased $161 million in 1999 after falling $46 million in 1998.

OTHER INCOME

Investment income increased by 5.9% in 1999 after dropping by 19.6% in 1998. Indirect taxes grew by 3.4%, while subsidies fell 3.1%. The net effect of these changes was that indirect taxes less subsidies grew by 4.0% compared to a growth of 0.1% in 1998. This difference is subtracted from GDP at Market Prices to arrive at GDP at Factor Cost. GDP at Factor Cost grew by 9.4% in 1999, compared to the 9.0% increase in GDP at market prices.

PERSONAL INCOME

Personal income went up 4.8% in 1999 compared to the growth of 6.0% in 1998. Wages and salaries (paid to residents of Alberta, no matter where earned) grew by 5.2% in 1999 after climbing 7.7% in 1998. Farm net income was up 38.5% (down 20.8% in 1998), while unincorporated business income grew by 3.8% (4.7% in 1998). Investment income was up 2.0% (1.3% in 1998). After current transfers to government are deducted, personal disposable income was up 6.6%, compared to 2.3% in 1998.

More information on the components of personal income and personal disposable income is presented in Table 8, while comparisons with Canada are found in Table 9.

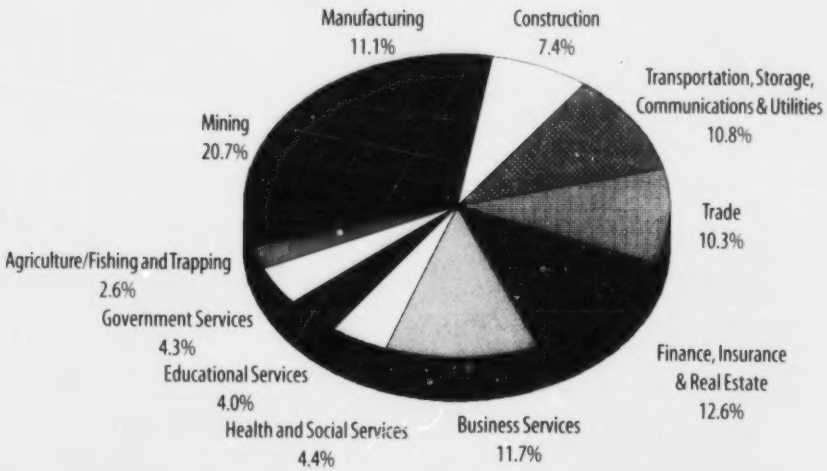
GROSS DOMESTIC PRODUCT BY INDUSTRY

The estimates presented in Tables 10 and 11 are based on Statistics Canada's Provincial GDP by Industry, 1984-98 released in November, 1999. As Statistics Canada published current dollar estimates only up to 1996, we have "inflated" their constant dollar estimates for 1997 to 1998 to estimate current dollar values and have projected estimates for 1999 for both current and constant dollars. We have also adjusted the totals of GDP at Factor Cost so that they match our estimates obtained through the income account – see Table 2. See Data Revisions section for further details.

The mining (20.7%) and finance, insurance and real estate industries (12.6%) were the two largest industries in 1999. When combined with all other service producing industries, total services accounted for over 66% of GDP at Factor Cost.

In current dollars, the mining industry (17.9%) and the utilities industries (15.6%) had the highest rates of growth, while agriculture (-7.2%) was the only industry that had a decline in growth in 1999. In constant dollars, the wholesale trade industry (11.2%) and the business services industries (7.8%) had the highest rates of growth, while the mining industry (-2.7) and the health and social services industry (-0.8%) had the biggest declines.

ALBERTA GDP BY INDUSTRY - 1999



GDP at Factor Cost
$105.9 billion

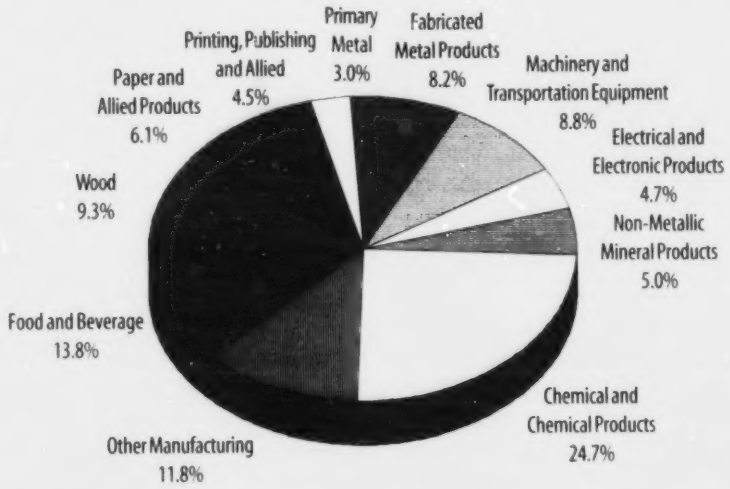
Among manufacturing industries, the chemical and chemical products industry made up 24.7% of the total manufacturing output produced in 1999. Food and beverage industries comprised 13.8% of the total, and the wood industries had a 9.3% share.

In current dollars, the refined petroleum and coal products industries (21.2%) and the wood industries (17.1%) had the highest rates of growth in 1999. Leather, textile and clothing industries (-2.0%) and printing, publishing and allied industries (-1.1%) had the biggest declines.

In constant dollars, the electrical and electrical products industries (18.8%) and the rubber and plastics products industries (14.8%) had the highest rate of growth. Printing, publishing and allied industries (-3.3%) and the machinery and transportation equipment industries (-1.9%) had the biggest declines during 1999.

Comparisons of Alberta's GDP estimates between 1998 and 1999 are presented in the summary table on the next page. Detailed data are provided in Tables 1 to 17.

MANUFACTURING INDUSTRIES - 1999



Primary Metal 3.0%
Fabricated Metal Products 8.2%
Machinery and Transportation Equipment 8.8%
Electrical and Electronic Products 4.7%
Non-Metallic Mineral Products 5.0%
Chemical and Chemical Products 24.7%
Other Manufacturing 11.8%
Food and Beverage 13.8%
Wood 9.3%
Paper and Allied Products 6.1%
Printing, Publishing and Allied 4.5%

Total
$11.9 billion

SUMMARY TABLE

ALBERTA GROSS DOMESTIC PRODUCT

1998-1999 *(Millions of Dollars)*

Expenditure Account	Constant 1992 Dollars 1998	1999	Percent Change	Current Dollars 1998	1999	Percent Change
Personal Expenditure	47,042	48,582	3.3	52,802	55,588	5.3
Government Expenditure	14,472	14,664	1.3	15,886	16.260	2.4
Government Fixed Capital	1,658	2,025	22.1	1,678	1,959	16.7
Business Residential Construction	5,071	5,026	-0.9	5,787	5,929	2.5

Statistical Discrepancy	1,608	-697	–
GDP at Factor Cost	**96,812**	**105,938**	**9.4**
Indirect Taxes less Subsidies	9,115	9,479	4.0
GDP at Market Prices	**105,927**	**115,417**	**9.0**

Alberta Economic Accounts

DATA REVISIONS

The major change to this year's publication is the treatment of non-autonomous government pension plans. Previously these plans were included in the government sector. This year, these plans are now included in the personal sector. This change affects personal sector data for the entire period of the accounts, 1971 to 1999. These changes were made in conjunction with changes to the National Income and Expenditure Accounts in the first quarter of 2000 and were made so that the government non-autonomous pension plans are treated in the same manner as autonomous, or trusteed pension plans.

Specifically, the investment income of these pension funds were deleted from the government sector and added to the personal sector for all years. Also, public sector pension benefits were deleted from the personal sector and are now treated as a reduction in personal wealth (not included in these accounts). Employer and employee contributions to pension plans are no longer treated as transfers to government. The net effect of these changes was to increase personal income and personal savings and reduce transfers. As the addition to and subtractions from the personal sector were equally balanced by subtractions from and additions to the government sector, there are no changes to GDP. For more information on these changes, see revisions to the National Income and Expenditure Accounts, first quarter, 2000.

The methodology to estimate corporation profits was changed for the year 1999 due to lack of detailed industry information at the Canada level. As a result of this change, changes to the estimated level for profits for 1999 could result whenever the detailed industry information becomes available.

Data for Table 13, Mid-Year Net Capital Stock, by Industry was revised from 1986 to 1998 to incorporate revised data.

The GDP at Factor Cost by Industry Tables (Tables 10 and 11) are based on the latest data from Statistics Canada published in November, 1999. Their data only included current dollar estimates up to 1996 and constant dollar estimates up to 1998. In this publication, we have estimated the current dollar estimates for 1997 to 1999 by "inflating" the constant dollar series and have projected the constant dollar estimates for 1999. We have also added a residual so that the total GDP at Factor Cost estimates from the Income Account (Table 2) and the current dollar industry table (Table 10) show the same values. In addition to estimating the current dollar values for 1997 to 1999 and the constant dollar estimates for 1999, we also had to extrapolate estimates back to 1971 for all industries.

As a result of linking the current and constant dollar historical estimates and rebasing the constant dollar estimates to 1992=100, the sum of the linked industries does not match the linked sum of the industries. Therefore, Table 11 (GDP at factor cost by industry, constant (1992) dollars) contains an adjusting entry for the mining and manufacturing industries so that the components will add to the total for years prior to 1992. In Table 10 (GDP at factor cost by industry, current dollars), the differences have been prorated to all the component industries.

As this methodology involves estimation of values for some industries based on projections using related indicators, these numbers are considered to be preliminary and could be revised if better indicators can be found.

Alberta Economic Accounts

ECONOMIC ACCOUNTS - CONCEPTS AND MEASUREMENT

A business monitors its performance by a set of financial statements that records, in dollar terms, its value of transactions over a period of time. Similarly, the economic performance of a province is measured by economic accounts, which record the value of transactions carried out by all persons, businesses, governments and institutions.

There are many uses and applications of economic accounts data. Some uses include: current economic analysis, forecasting, background to budget preparations, examinations of economic growth, model building, structural analysis and education.

Some of the more commonly used terms are:

Gross Domestic Product (GDP) - is a measure of the total value of production within the boundaries of the province, regardless of who owns the factors of production (land, labour and capital).

GDP at Market Prices - is a measure of GDP based on the earnings of the factors of production and the non-factor costs of production (e.g., indirect taxes less subsidies).

GDP in Current Dollars - is a measure of GDP calculated using current year prices and quantities. This measure is sometimes referred to as GDP in "nominal" dollars.

GDP in Constant Dollars - is a measure of GDP calculated using current volumes and base year prices. In these accounts, the base year is 1992. This measure is used to estimate what growth would be without the effects of price change and is often referred to as "real" GDP.

GDP at Factor Cost - is a measure of GDP based only on the earnings of the factors of production (e.g., it excludes indirect taxes less subsidies). This is the measure of GDP used in the GDP by Industry estimates in current and constant dollars (Tables 10 and 11).

Final Domestic Demand (FDD) - is a measure of how the economy performs without counting external transactions (exports, imports) or inventory changes. FDD is derived by adding consumer and government expenditures plus business and government investment. FDD is measured in both current and constant dollars.

Gross National Product (GNP) - is a measure of the total income accruing to the residents of a region. The difference between GDP and GNP is that GDP measures the value of production within the province, no matter who owns the factors of production, whereas GNP is a measure of the income of the residents of the province. GNP is derived from GDP by subtracting investment income paid to non-residents and adding investment income received from non-residents. Presently, there is no way to measure investment income paid to and received from other provinces, so there is no measure of GNP available for Alberta.

Other definitions related to the components of these terms are presented in the appendix.

Table 1A: Comparison of Gross Domestic Product, Alberta and Canada in Current Dollars

Year	Gross Domestic Product		Percentage Change in GDP		Alberta GDP as Percentage of Canada	Per Capita GDP		
	Alberta	Canada	Alberta	Canada		Alberta	Canada	Ratio
	(Millions of Dollars)					(Dollars)		
1971	7,995	98,630	—	—	8.1	4,799	4,491	1.07
1972	9,129	110,124	14.2	11.7	8.3	5,389	4,956	1.09

[1] GDP at Market Prices is obtained by adding Indirect Taxes Less Subsidies; See Table 2
[2] Preliminary Estimates - Subject to Revision
[3] Includes only Logging and Services Incidental to Forestry; Excludes Paper and Allied Products and Wood which are included in Manufacturing

Note 1: Components may not add to totals due to rounding
Note 2: This table can also be retrieved from ASIST, Matrix 6101

Alberta Economic Accounts

DEFINITION OF TERMS

This section provides a short definition or explanation of terms which appear in the accounts. Additional detail can be obtained from either the U.N. System of National Accounts or the National Income and Expenditure Accounts (NIEA) of Canada. Both sources are identified below:

The following abbreviations are used in this section:

1. NIEA
Dominion Bureau of Statistics. *National Income and Expenditure Accounts, 1926-1956* Ottawa: Queen's Printer, 1962. Cat. No. 13-502.

2. NIEA, VOL. 1
Statistics Canada. *National Income and Expenditure Accounts, Volume 1* (The Annual Estimates, 1926 - 1974). Ottawa: Information Canada, 1976. Cat. No. 13-531.

3. NIEA, Vol. 2
Statistics Canada. *National Income and Expenditure Accounts, Volume 2* (The Quarterly Estimates, 1947 -1974). Ottawa: Information Canada, 1976. Cat. No. 13-533.

4. NIEA, Vol. 3
Statistics Canada. *National Income and Expenditure Accounts, Volume 3* (A Guide to the National Income and Expenditure Accounts, Definitions - Concepts - Sources - Methods). Ottawa: Information Canada, 1975. Cat. No. 13-549E.

5. S. C.
Statistics Canada. When followed by a number, it refers to a specific Statistics Canada catalogue.

6. SNA
United Nations. *A System of National Accounts.* Studies in Methods, Series F No. 2 Rev. 3. New York: United Nations, 1968.

Accrued Net Income of farm operators from farm production:
This item shows cash receipts from the sale of farm products, the imputed value of goods consumed by farm families, supplementary farm payments, and the value of inventory changes (except depreciation on residential dwellings). Negative values occur when the value of depletion of inventories and operating expenses exceeds cash receipts and supplementary payments.

Adjustment on grain transactions:
The Canadian Wheat Board (CWB) makes payments to producers in the current year on crops delivered in previous years. As the Income Account is a measure of the earnings arising out of current production rather than actual cash receipts, adjustments have to be made. A second portion of this adjustment allows for the fact that the earnings of the CWB are calculated on the basis of the change in book values of inventories, whereas the required valuation of inventories for the Accounts is the value of physical change. A third portion was added to this adjustment beginning in 1987. This new adjustment adjusts farm subsidies from a cash to an accrual basis. Negative values occur when CWB payments to farmers in a given year are higher than the actual value of grain produced in that year. That is, payments have been made for grain delivered in previous years.

Business sector:
This sector consists of all corporate and government business enterprises resident in Alberta. Problems arise due to the presence of multi-provincial corporations. However, a concerted effort has been made to resolve difficulties in this area using available data on an establishment basis (see Table 9).

Capital assistance:
An expenditure item of federal and provincial governments, capital assistance consists of grants to incorporated and unincorporated businesses with the aim of assisting construction of new facilities or the acquisition of new production machinery and equipment.

Capital consumption allowances:
Applicable to both government and business, this item has two components which at present are not completely separable: (1) an allowance for consumption of fixed capital (depreciation allowance) in the economy, and (2) various valuation adjustments arising from differences in the concepts of income and capital consumption as reflected in business accounting records and the corresponding concepts used in the National Accounts. The item is adjusted by adding capital outlays charged to current expense plus the claim portion of business and residential insurance and subtracting non-capital outlays charged to the capital account.

Corporation profits before taxes:
This component in the accounts is calculated before deduction of income and excess profits taxes, depletion allowances, charitable donations, and before payments of dividends to non-residents. Due to the complexity of this item, a more complete description and derivation of corporate profits can be found in National Income and Expenditure Accounts, Chapter 7, Statistics Canada, 1975, Catalogue No. 13-549E.

Current transfers:
Current transfers are defined as "transfers of income between transactors. The transfers are made from the current income of the payer and add to the current income of the recipient for such purposes as consumption expenditure" (SNA, Page 231). The main distinction between a transfer payment and the purchase of a good or service is that "there is no direct link between the payment and the services received" in the case of the transfer payment (SNA, Page 105).

Current transfers to business from persons:
This is the non-productive or transfer portion of interest on the consumer debt. It is equal to total interest on the consumer debt less the administrative portion.

Current transfers to government from persons:
Transfers to Government includes "Direct Taxes" and "Other Current Transfers to Government". See the relevant headings for further explanation of these terms.

Current transfers to non-residents from persons:
This includes personal remittances to non-resident governments, corporations, and persons.

Current transfers to persons from business:
Payments classified under this heading refer to charitable and other contributions from corporations to persons and unincorporated business and to bad debt allowances, that is "the amounts charged by businesses in respect to doubtful accounts, net of recoveries" (NIEA, Page 113).

Current transfers to persons from government:
An expenditure of the federal, provincial and local governments, these transfers encompass all direct payments from governments to persons. Included in this component are such items as family and youth allowances, unemployment insurance

benefits, workers' compensation benefits, general welfare payments, old age security benefits, and Canada Pension Plan benefits.

Current transfers to persons from non-residents:
This refers to items such as pensions paid by foreign governments, cash payments by relatives or friends living in other countries, charitable and other contributions made by non-resident corporations.

Depreciation:
Depreciation is the actual wear and tear and obsolescence of fixed capital assets in the process of economic production. Depreciation is not measured directly - it is estimated by measuring Capital Consumption Allowances.

Direct taxes - business enterprises:
This item encompasses three components: general income taxes, mining and logging taxes and other direct taxes. These taxes are levied on profits as opposed to taxes on capital, on place of business or on sales, which are indirect taxes. These taxes are levied against private and government business enterprises and are collected by the federal and provincial governments.

Direct taxes - non-residents:
These are taxes levied by the federal government on payments to non-residents on such items as dividends, interest, royalties, management fees, etc.

Direct taxes - persons:
This component encompasses such items as personal income taxes and employer and employee contributions to the Canada Pension Plan. Direct taxes are mainly levies assessed against individuals that take some account of ability to pay and are collected by both the federal and provincial governments.

Exports and Imports of goods and services:
Exports of goods and services include receipts from exports of merchandise, freight and shipping credits earned, travel expenditures of non-residents in Alberta, and other earnings, especially receipts from business services rendered to non-residents. Imports of goods and services include payments for imports of merchandise, freight and shipping charges incurred, travel expenditures of Albertans in the rest of Canada and abroad, and other payments, especially payments for business services rendered by non-residents. To date, it has not been possible to include Alberta transactions in freight and shipping, and business services with the rest of Canada. Therefore, for these categories, only those transactions with the rest of the world are included.

Factor cost:
Gross Domestic Product at factor cost is a measure of income accruing to the factors of production (land, labour and capital). It does not include income that accrues to the non-factor or invisible components of GDP (see Market Prices). Thus GDP at factor cost is derived from GDP at market prices by subtracting indirect taxes less subsidies.

Final Domestic Demand (FDD):
This is a measure of the domestic activity in the province. It is the sum of personal and government expenditures plus gross fixed capital formation.

Government current expenditure on goods and services:
This component consists of the outlays of the federal, provincial and local governments and hospitals for goods and services. It includes general administrative expenses, such as wages and salaries, as well as outlays for goods and other services required in discharging governmental responsibilities. Thus, it consists of purchases from businesses and non-residents, wages and

salaries of government employees, medical care expenditures, capital consumption allowances and other miscellaneous outlays.

Government sector:
This sector includes the transactions of all government departments and agencies at the federal, provincial, and municipal levels. Government enterprises, which are profit oriented, are included in the business sector. The government sector also includes hospitals. It should be noted that the government sector table does not necessarily reflect government economic transactions as they relate to accounting practices. These numbers thus differ from those presented in the "public accounts" of the different levels of government.

Gross domestic product (GDP) in constant dollars:
This is a measure of total production during a given time frame and a given geographical location, which is valued in prices for some base year. For Alberta, the base year used is 1992.

Gross domestic product (GDP) in current dollars:
This refers to the value of total production within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. It includes output that is produced by capital stock which is owned by non-residents of the region, but it does not include income received by residents on production which takes place outside the region. Thus GDP is strictly a measure of production within a specific region, regardless of ownership of the factors of production.

Gross fixed capital formation:
Government and business gross fixed capital formation is defined to include expenditures of government and business for new construction and new machinery and equipment. Expenditures of persons for new residential dwellings are also included, since individuals, in their capacity as home-owners, are treated as business enterprises. Only new construction and new machinery and equipment are included; purchases of land, used buildings, and second hand machinery and equipment are excluded since they do not represent current production of goods and services.

Gross capital stock:
Gross stocks are the cumulative value of gross investment in capital goods less cumulative discards.

Implicit price Indexes:
These are currently - weighted price indexes, which measure yearly changes in price as well as changes in expenditure patterns between items. They are calculated by dividing the current dollar values of the components of Gross Domestic Product by their deflated constant dollar series.

Indirect taxes:
These are taxes levied by the federal, provincial and local governments. Indirect taxes represent a part of the market price of goods and services which is not received by factors of production. They are imposed on the production and/or sale of goods and services or they may be levied in accordance with formulae which take account of certain capital holdings (e.g., real property tax). They may also take the form of charges for the right to engage in certain activities of a personal, professional, industrial or commercial nature. Indirect taxes include such components as the Goods and Services Tax (GST) beginning in 1991 and the manufacturers' sales tax (federal) for earlier years, retail sales taxes (provincial), customs duties, excise duties and taxes (including oil export charges), natural resource taxes, real property taxes, amusement taxes and profits of liquor boards. Indirect taxes, however, exclude the sales of oil and gas rights.

Interest and miscellaneous investment income:
This component includes bond interest, mortgage interest, bank interest, royalties, investment income of life insurance companies, etc. This item is closely linked with investment income of persons, investment income of governments and interest on the public debt. The nature of these linkages is fully explained in National Income and Expenditure Accounts, Chapter 7, Statistics Canada No. 13-549E.

Interest, dividends and miscellaneous investment income of persons:
This category is a measure of the interest income of persons. It includes bank, mortgage and bond interest, both paid and imputed. It also includes royalties received by persons and dividends received on Canadian bond holdings. It does not include interest on the public debt nor interest on the consumer debt. In addition to the above, the investment income of life insurance companies and fraternal organizations is included in the figures. The series takes into account both interest and dividends received from the corporate and government business enterprise sector as well as the non-resident sector of the accounts.

Interest on the public debt:
This is an expenditure of all levels of government and hospitals. It encompasses all payments made in respect of their borrowed funds.

Inventories:
Value of physical change in inventories is defined as the change in the value of farm and non-farm business inventories (change in physical volume) valued at the average market prices of the period. It is necessary that the new change of business holdings of inventories during the year be included in the Gross Domestic Product to allow for that portion of current production which has not yet been sold (positive change in inventories), or to eliminate that portion of previous years' production which are included in sales of the current year (negative change in inventories).

Inventory valuation adjustment:
The inventory valuation adjustment is the difference between the value of physical change in inventory and the change in inventory book value. This adjustment is made to remove, from corporation profits and the net income of incorporated business, any unrealized gains or losses arising from the effect of price changes on holdings of inventories. Since the method of calculating farm income automatically eliminates such gains or losses, this adjustment is required only for business inventories and grain in commercial channels other than the Canadian Wheat Board.

Investment Income (government):
A revenue source for the federal, provincial and local governments and hospitals, investment income includes such items as interest on government-held public funds, interest on loans, advances and other investments, royalties and remittances from government enterprises.

Market prices:
Gross Domestic Product at market prices is a concept that measures total production based on the earnings of the factors of production (factor cost) plus the non-factor costs of production (indirect taxes less subsidies). GDP at Market Prices also includes an indirect measure of depreciation called Capital Consumption Allowances. Since this is a measure of production, it does not include transfer payments (see Current Transfers).

Mid-year net capital stocks:
Mid-year net capital stocks are net stocks adjusted to the middle of each year. Net stocks are gross stocks less deductions of losses in value through physical deterioration and obsolescence.

Military pay and allowances:
This includes wages and salaries paid to members of the armed forces as well as supplementary payments such as employer contributions to pension funds. The value of uniforms, free medical examinations, and food supplied to personnel is included for years prior to 1966. The value of the provision of barracks to personnel is not included.

Miscellaneous investment income from non-residents:
Miscellaneous investment income from non-residents includes dividend, interest and business service payments to Alberta businesses. Business service payments include rent, royalties, advertising, research, insurance and management fees. For the provincial accounts there should be two components for payments from non-residents: payments from non-Canadians and payments from Canadians but non-Albertans. Because the data for interprovincial payments are not available at present, the component "payments from Canadians but non-Albertans" is not estimated.

Net domestic income at factor cost:
This is the sum of the earnings of the factors of production, namely, land, labour and capital. It is calculated on a domestic basis since these components are the earnings arising from production within the boundaries of Alberta.

Net income of non-farm unincorporated business including rent:
This item includes the net income of all non-farm unincorporated businesses covering almost every industry in the economy including the net income of independent professional practitioners, such as doctors, dentists, nurses, lawyers and engineers. It also includes the rental incomes of persons.

Non-resident sector:
This sector includes the transactions of goods and services between residents of Alberta and all persons, governments and business enterprises located outside the province. There is no specific table for this sector. Total transactions are shown as exports and imports in the consolidated expenditure account, while exports are broken into major groups in Tables 17 and 18.

Oil export tax/charge:
In October, 1973, the federal government imposed a tax on the export of crude oil under the *Oil Export Tax Act*. This Act was in effect until April 1, 1974. Provisions were made within the Act to make payments to the exporting provinces of 50 percent of tax revenues derived from the export tax. The share of each province was based on a production formula. As of April 1, 1974, the tax became a charge on the export of crude oil and certain petroleum products under the *Petroleum Administration Act*. Under this Act, no payments were made to the exporting provinces. The oil export tax/charge is included in federal government revenue as an indirect tax.

Other current transfers from persons to government:
A revenue item for the federal, provincial and local governments, these transfers involve direct remittances from persons to government. They are similar to direct taxes, however, the transfer items are not necessarily related to the ability to pay. They also involve less compulsion and greater freedom of choice than direct taxes. Included in this component are such items as motor vehicle licenses and permits (personal purposes only), contributions to hospital and medical care insurance, game licenses, marriage licenses and fines and penalties.

Payments to non-residents:
Payments to non-residents include dividend, interest and business service payments. Business service payments include rent, royalties,

advertising, insurance, research and management fees. As explained in the item Miscellaneous Investment Income from Non-Residents, only the Payments to Non-Canadians component is estimated. Net payments to Canadians but non-Albertans is derived residually.

Personal disposable income:
This equals personal income minus direct taxes and other current transfers to government by persons.

Personal expenditure on consumer goods and services:
Personal consumer expenditure is broken down into the following categories:

(i) Durable Goods -
This item refers to goods obtained by the persons which have an expected long lifetime of use and involve a substantial sum of money to purchase. It includes items such as automobiles, recreation equipment and appliances.

(ii) Non-Durable Goods -
These are "goods" with an expected life-time of less than one year". (SNA, Page 235).

(iii) Semi-Durable Goods -
These are goods which can be used for a period of time of a year or more and do not involve large sums of money to purchase. Included are items such as clothing, footwear, linens and kitchenware.

(iv) Services -
This item covers personal expenditure on a broad variety of services ranging from rent paid and imputed on dwellings to transportation, recreation or personal care services.

Personal income:
This is a measure of all income received by Albertans. It includes: wages, salaries and supplementary labour income; military pay and allowances; net income of non-farm unincorporated business; net income received by farm operators from farm production (excluding the adjustment on grain transactions); interest, dividends, and miscellaneous investment income and all transfer payments received by persons.

Personal savings:
Savings include the value of physical change in farm inventories and the value of personal (non-farm) savings. They also include the change in book value of unincorporated business inventories.

Personal sector:
This sector comprises the transactions of all individuals, unincorporated businesses and private non-profit organizations resident in Alberta (see Table 7).

Production:
Production is the creation of goods and services on which members of the community, or the community as a whole, set a dollar value. Any process that creates or adds value to already existing goods is production. For example, the activities of labourers and entrepreneurs who produce and sell the entire range of goods and services; the activities of doctors, lawyers, entertainers, dry cleaners and all who provide services to households and businesses; and the activities of government are all production. They, in various ways, create or improve goods and services, and hence add economic value. Also included in production is "income in kind" which refers to such items as the value of food consumed on farms and the imputed value of free lodging provided by employers. Excluded are illegal activities and the sale of previously owned assets. However, any gains or profits in selling used assets or any fees associated with their sale are included in production.

Statistical Discrepancy:
The final estimate of Gross Domestic Product of each year is taken as the average of the statistical totals of the consolidated income account and the expenditure account. That is, the difference between these two independently estimated totals (the residual) is divided into two halves. To produce an arithmetical balance between the two totals, one half of the statistical discrepancy is added to the lower estimate, and one half is subtracted from the higher estimate. The statistical discrepancy also reflects net Alberta receipts in business services, and freight and shipping transactions with the rest of Canada, as well as flaws in estimation procedures, and discrepancies in the timing with which the income and expenditure data are recorded. Persistently positive (or negative) statistical discrepancies on one side of the accounts may suggest that there is a systematic, built-in, bias in the estimates. Unfortunately, it is not possible to identify the sources of bias with any degree of certainty.

Subsidies:
An expenditure item of the federal and provincial governments, subsidies represent payments made by governments to business toward current costs of production, whether this be at the producer or distributor level. Subsidies may be made pertaining to agriculture (for example, Canadian Dairy Commission Payments), transportation (such as payments to railways under the National Transportation Act), and communications, among others.

Supplementary labour income:
This covers payments made by employers on behalf of employees and can be considered as payment for the services of employees. It includes employers' contributions to unemployment insurance, welfare funds and workers' compensation.

Undistributed corporation profits:
Undistributed corporation profits is the residual after deducting, from corporation profits before taxes, corporation income tax, dividends paid to non-residents, dividends paid to Canadian residents and current transfers to persons.

Value added:
The value added by an industry is the difference between the gross value of production of that industry less the total value of purchases (including imports) of goods and services from other firms which enter into that industry's production process (i.e., the intermediate goods and services). If we sum the value added figures for all industries in Alberta, we would calculate GDP by industry. This method is not used in these accounts.

Wages and salaries:
This refers to direct payments other than pensions made to employees. It is calculated before deductions are made for contributions to social security, taxes and so on. It also includes income in kind, such as free lodging. Retroactive payments are included in the period of payment rather than in the period of earning. For the years 1981 to current, wages and salaries are now calculated on a province of employment basis for GDP and wages and salaries by industries, and on a province of residence basis for personal income.
